**Published Paper**

# Questions we might ask ourselves

- How can I organise this data?
- How can I make this data meaningful?
- How can I make this data tidy?

And maybe even more importantly...

- Why should I even bother with tidying my data?

# The Wickham Six

90% of data analysis can be reduced to these six English verbs:

- select
- filter
- mutate
- arrange
- group\_by
- summarise

In addition:

- gather
- spread
- separate
